---

The knowledge and techniques around medical affairs have been advancing. The lifelong learning programs supported by Gifu Pharmaceutical University are conducted. The 3 unique programs consist of a lifelong learning program concerning recent medical topics provided by our university and a reeducation program containing some lectures and practices concerning the most advanced knowledge and techniques on pharmacy and medicine, provided by co-organization of 3 public universities; Nagoya City University, University of Shizuoka and Gifu Pharmaceutical University. The other one is an annual lifelong learning program promoted by Gifu Pharmaceutical University Pharmacy.

The Gifu Pharmaceutical University Pharmacy has accommodated a hundred of prescriptions a day from some hospitals. The annual lifelong learning programs held by our pharmacy have comprehensively presented practical knowledge and techniques on newly developed medicines, pharmaceutical care practice, pharmacotherapy, community pharmaceuticals, and so on, for these 10 years.

The pharmacists should have any responsibility for the pharmacotherapy as a medical staff. The pharmacists should make a concerted effort to pharmacotherapy through pharmaceutical care practice by cooperation with community pharmacists, hospital pharmacists and the pharmaceutical associations. Our lifelong learning program has contributed the improvement of pharmaceutical skills and the communication with pharmacists, doctors and other medical stuffs.
