

S09-3 Employment and training for new recruits

○Satoru TAKAHASHI¹

¹Chibanishi General Hospital

Uncertain future bothered me because there were twists and turns to go to Pharmacy school and when I graduated the university, my age was too old to be hired by the employers of common companies. On the other hand, there were a few applicants for hospital pharmacists at that time so it was lucky that I was employed by “Tokushukai Group” as a hospital pharmacist. However, there was no escape from my career and I could not help working hard even though the hospital director in Tokunoshima which is the first workplace said to me with a hopeless word that "You are unnecessary".

A lot of things were learnt during working with him. 1) The idea of “Tokushukai Group” about health care 2) There is no boundary among health care staff to help patients within the range of regulations. 3) There is no fear no matter how it is busy.

The pharmacist license was extremely useful though there was no useful one which I learned at the university when choosing my career. When graduating the university, I had never imagined that I became the representative to organize “Pharmacy Department of Tokushukai Group” I would like to discuss the most useful ability to work at the hospital and when to learn it, which have formed me.
