The Model Core Curriculum for Practical On-site Training was drafted in 2003. This curriculum has educational objectives and learning strategies, but not evaluation program. The Committee for the Educational Guidance System in Practical On-site Training, established in 2004 by the Pharmaceutical Society of Japan, is a committee for the development of the guidance system for practical on-site training. This committee has proposed the evaluation program and manual for specific behavioral objectives in the Model Core Curriculum for Practical On-site Training. A verification trial has already been performed in several schools/colleges/universities. This symposium introduces the evaluation program and manual in practical on-site training and proposes the performance of verification trials in more facilities.

In this symposium, efforts for effective practical on-site training by the Council on Pharmaceutical Education and the Japan Pharmaceutical Association are also introduced.
