MODEL CORE CURRICULUM FOR
PHARMACY EDUCATION

-2015 version-

March, 2018

The Pharmaceutical Society of Japan
Council for Fostering Human Resources in Pharmacy
Education, MEXT, Japan
## CONTENTS

**PREFACE** .............................................................................................................................. 1

**PROFESSIONAL COMPETENCIES FOR PHARMACISTS** .................................................. 3

A. Philosophical Principles for the Education of Student Pharmacists ........................................ 5
   (1) Mission of Pharmacists .............................................................................................................. 5
   (2) Ethical Values Required of Pharmacists .................................................................................. 6
   (3) Building Collaborative Relationships among Patients, Pharmacists, and Other Healthcare Professionals .............................................................................................................. 7
   (4) Collaboration among Healthcare Professionals ............................................................................. 7
   (5) Self-Development and Fostering the Next Generation of Pharmacists ........................................ 8

B. Pharmaceutical Sciences in Society .............................................................................................. 9
   (1) Pharmacists Serving the Public ................................................................................................. 9
   (2) Laws and Regulations Governing Pharmacists and Pharmaceuticals .......................................... 9
   (3) Japanese Social Security System and Health Economics ......................................................... 10
   (4) Roles of Community Pharmacies and Pharmacists ................................................................. 11

C. Fundamentals of Pharmaceutical Sciences .................................................................................. 12
   **C1. Physical Properties of Substances** ...................................................................................... 12
      (1) Structures of Substances ........................................................................................................ 12
      (2) Energy of Substances and Equilibrium States ....................................................................... 12
      (3) Kinetic Properties of Chemical Reactions ............................................................................. 14
   **C2. Analysis of Chemical Substances** ..................................................................................... 14
      (1) Fundamentals of Analytical Methodology .......................................................................... 14
      (2) Chemical Equilibria in Solutions ......................................................................................... 14
      (3) Qualitative and Quantitative Analyses of Chemical Substances .......................................... 15
      (4) Instrumental Analysis ........................................................................................................... 15
      (5) Separation Analysis ............................................................................................................. 16
      (6) Techniques for Biomedical Analysis ..................................................................................... 16
   **C3. Properties and Reactions of Chemical Substances** ......................................................... 16
      (1) Fundamental Properties of Chemical Substances ............................................................... 16
      (2) Structures and Reactions of Basic Organic Compounds ..................................................... 17
      (3) Properties and Reactions of Functional Groups .................................................................... 18
      (4) Structural Determination of Chemical Substances .............................................................. 18
(5) Structures and Properties of Inorganic Compounds and Complexes ........................................ 19

C4. Chemistry of Biomolecules and Drugs .................................................................................... 19
(1) Structures and Chemical Properties of Target Molecules ...................................................... 19
(2) Chemistry of Biological Reactions .......................................................................................... 20
(3) Structures, Properties, and Actions of Drugs ......................................................................... 20

C5. Pharmacognosy (Naturally Derived Drugs) ............................................................................. 22
(1) Plant, Animal, and Mineral Sources of Drugs ........................................................................ 22
(2) Natural Products and Their Derivatives as Drug Sources ....................................................... 22

C6. Fundamentals of Biochemistry ................................................................................................. 23
(1) Structures and Functions of Cells .............................................................................................. 23
(2) Fundamentals of Biomolecules ............................................................................................... 24
(3) Proteins Responsible for Biological Functions .......................................................................... 24
(4) Fundamentals of Genetics ........................................................................................................ 25
(5) Fundamentals of Metabolism .................................................................................................... 25
(6) Intercellular Communication and Intracellular Signal Transduction ....................................... 26
(7) Cell Cycle .................................................................................................................................. 26

C7. Anatomy and Human Physiology ............................................................................................. 27
(1) Fundamentals of Human Anatomy .......................................................................................... 27
(2) Fundamentals of Human Physiology ....................................................................................... 28

C8. Biological Defense Mechanisms and Microorganisms ............................................................. 29
(1) Fundamentals of Immunology .................................................................................................. 29
(2) Fundamentals of the Human Immune Response ..................................................................... 30
(3) Fundamentals of Microbiology .................................................................................................. 30
(4) Human Pathogenic Microorganisms ......................................................................................... 31

D. Health and Environmental Sciences .......................................................................................... 32

D1. Health Sciences ....................................................................................................................... 32
(1) Public Health ............................................................................................................................... 32
(2) Disease Prevention ..................................................................................................................... 32
(3) Nutrition and Food Safety .......................................................................................................... 33

D2. Environmental Sciences ........................................................................................................... 34
(1) Effects of Chemical Substances and Radiation on Health ......................................................... 34
(2) Regulatory Sciences in Environmental Health ........................................................................... 35
E. Therapeutics: Clinical Pharmacology, Pharmacotherapy, and Pharmacokinetics ........................................37

E1. Pharmacology, Pathophysiology, and Clinical Laboratory Tests .........................................................37

(1) Pharmacology ........................................................................................................................................37
(2) Pathophysiology and Clinical Laboratory Tests ..................................................................................37
(3) Common Disease States and an Overview on Making Clinical Decisions ........................................38
(4) Medication Safety and Quality Improvement .....................................................................................38

E2. Pharmacology, Pathophysiology, and Pharmacotherapy .................................................................39

(1) Drugs Used for the Treatment of Nervous System Disorders ............................................................39
(2) Immunosuppressants, Antiinflammatory Agents, Drugs Used for the Treatment of Allergies, and Bone/Joint Disorders ........................................................................................................41
(3) Drugs Used for the Treatment of Cardiovascular, Hematological, Renal/Urinary Tract, and Reproductive Disorders ................................................................................................................................42
(4) Drugs Used for the Treatment of Respiratory and Digestive Tract Disorders ..................................44
(5) Drugs Used for the Treatment of Metabolic and Endocrine Disorders ..............................................46
(6) Drugs Used for the Treatment of Ophthalmological, Ear/Nose/Throat, and Dermatological Conditions ........................................................................................................................................47
(7) Drugs Used for the Treatment of Infectious Diseases and Cancer .......................................................48
(8) Biologics, Cell Therapy, and Genomics ..................................................................................................51
(9) Over-the-Counter and Behind-the-Counter Drugs and Self-Medication ..............................................52
(10) Kampo Medicine ..................................................................................................................................52
(11) Therapeutics Optimization ..................................................................................................................53

E3. Essential Information for Pharmacotherapy ..........................................................................................53

(1) Drug Information ..................................................................................................................................53
(2) Patient Information ..............................................................................................................................55
(3) Personalized Medicine ..........................................................................................................................56

E4. Drug Disposition ......................................................................................................................................57

(1) Drug Disposition ..................................................................................................................................57
(2) Pharmacokinetic Analysis .....................................................................................................................58

E5. Science for Drug Formulation ...............................................................................................................58

(1) Properties of Formulations (Dosage Forms) .......................................................................................58
(2) Design of Formulations ........................................................................................................................59
(3) Drug Delivery Systems ..........................................................................................................................60
F. Pharmacy Practice Experiences ................................................................. 61
   (1) Fundamentals of Pharmacy Practice ..................................................... 61
   (2) Prescription Processing, Medication Preparation, and Dispensing ............. 62
   (3) Practical Application of Pharmacotherapy .............................................. 66
   (4) Participation on Interprofessional Collaborative Work .............................. 68
   (5) Participation in Community Healthcare, Medical Care, and Welfare ............ 69

G. Research .................................................................................................... 71
   (1) Research in Pharmaceutical Sciences .................................................... 71
   (2) Legal Regulations and Ethical Principles Governing Research .................... 71
   (3) Conducting Research ......................................................................... 71

MEMBERS OF WORKING GROUP ................................................................ 73
PREFACE

Progress in advanced science and technology for the development and application of pharmaceuticals is dependent on the availability of highly skilled pharmacists and pharmaceutical researchers. Pharmacists of the future should have an international outlook and be committed to lifelong learning. University and college faculties and departments of pharmaceutical sciences play a major role in ensuring that pools of such pharmacists and pharmaceutical researchers are available by improving the quality of pharmacy education offered and meeting social responsibilities to uphold the highest standards for their qualification. To achieve those goals, Japanese educators reviewed the curriculum content from the viewpoint of overall pharmacy education and reorganized the courses from a “teacher-centered” to a “learner-focused” format.

The Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) compiled the first version of the Model Core Curriculum for Pharmaceutical Education, which was published by the Pharmaceutical Society of Japan in August 2002. That volume was used during the period of transition (starting in 2006) of tertiary pharmaceutical science education from a 4-year to a 6-year course. Enrollment in the 6-year course has shown steady growth since its introduction. Evaluations of the new curriculum for the education of pharmacists, which includes practical hospital and pharmacy training, indicated that it represents an improvement over the previous, traditional format.

Approximately 10 years after the initial curriculum was published, the Model Core Curriculum for Pharmacy Practice Experiences was separately collected in an additional volume. During and after the transition period in pharmacy education, certain problems in applying the new curriculum became evident, for example: 1) The scientific content had become outdated. 2) The practical training aspects needed to be improved to reflect progress in various medical fields. 3) The content was overabundant, because the curriculum was developed as a stacked system, making it difficult to demonstrate the uniqueness of university education for pharmacists. 4) In addition to training activities, the importance of research also needed to be emphasized. Therefore, MEXT and the Pharmaceutical Society of Japan set up multiple committees to examine revision of the curriculum.

The subsequent revision of the Model Core Curriculum for Pharmacy Practice Experiences addressed five main points. 1) The contents were reduced to coverage of the model core curriculum, with 70% equivalent to the number of education courses and the remaining 30% offering specialized educational text. 2) The “Pharmacy Practice Experiences” and “Research” regions were enhanced. 3) The format of the curriculum-based contents focused on the application of an “outcome-based education” system instead of the “ticked-off item system.” 4) The 10 required items upon graduation from the 6-year course were grouped under “Professional Competencies for Pharmacists.” 5) Learning areas were clearly distinguished under seven major headings.

This Model Core Curriculum for Pharmacy Education (2015 Version) was also developed through a process of review and revision, including MEXT approval, and has been used by newly enrolled students
in pharmaceutical science faculties since 2015. Major new features of this curriculum are: 1) The focus was changed to outcome-based education in terms of “Professional Competencies for Pharmacists.” 2) To help students acquire the final “Professional Competencies for Pharmacists,” general instructional objectives (GIOs) and specific behavioral objectives (SBOs) were set. 3) Text related to Items A to G was edited to minimize the number of pages covering carefully selected contents. 4) The “Pharmacy Practice Experiences” and “Research” sections were limited to actual practices in hospitals and pharmacies and those that can be carried out in all faculties and departments of pharmaceutical science, respectively.

Continuing advances in pharmacist technology and drug development are remarkable, although they are accompanied by rising healthcare costs in developing countries. It is therefore an urgent task to globalize medical education, including that in the pharmaceutical sciences. In recognition of that reality, Japan will continue efforts to ensure that its education system, curriculum content, and knowledge taught meet or exceed international standards. The *Model Core Curriculum for Pharmacy Education (2015 version)* is therefore consistent with the WHO 8-star pharmacist concept for optimum pharmaceutical care and decision making.
PROFESSIONAL COMPETENCIES FOR PHARMACISTS

1. **Professionalism**: Fulfill the legal, ethical, and professional responsibilities of pharmacists.

2. **Patient-oriented attitude**: Respect the rights of individuals and promote the health and welfare of patients and consumers.

3. **Communication skills**: Communicate effectively with patients, consumers, and other healthcare professionals to provide necessary information.

4. **Interprofessional team-care**: Collaborate with healthcare teams in hospitals and regional communities.

5. **Basic sciences**: Understand the effects of medicines and chemicals on living bodies and the environments.

6. **Medication therapy management**: Contribute to the optimal use of medicines through pharmaceutical care.

7. **Community health and medical care**: Contribute to public health and pharmaceutical hygiene and enhance community healthcare and home care.

8. **Research**: Engage in research on drug development and the appropriate use of medicines to improve the healthcare environment.

9. **Lifelong learning**: Continue lifelong professional development in response to the advances in healthcare.

10. **Education and training**: Contribute to the development of the next generation of professional pharmacists.

To ensure that pharmacists acquire professional competencies, general instructional objectives (GIOs) and specific behavioral objectives (SBOs) were established.
MEMBERS OF WORKING GROUP

FURUSAWA Yasuhide  Meiji Pharmaceutical University
HANDA Satoko  Showa University, School of Pharmacy
HASEGAWA Yoichi  Meijyo University, Faculty of Pharmacy
HIRAI Midori  Kobe University, Emeritus Professor
HIRATA Kazumasa  Osaka University, Graduate School and School of Pharmaceutical Sciences
HORIUCHI Masako  Showa Pharmaceutical University
ICHIKAWA Atushi*  Kyoto University; Mukogawa Women’s University, Professor Emeritus
IHARA Kumiko  Showa Pharmaceutical University
IRIE Tetsumi  Kumamoto University, Graduate School of Life Sciences
ISHIZAKI Miyuki  Josai International University, Faculty of Pharmaceutical Sciences
ITO Kiyomi  Musashino University, Faculty of Pharmacy
ITOH Tomoo  Kitasato University
IWASAWA Makiko  Kitasato University School of Pharmacy, Research and Education Center for Clinical Pharmacy
KAGAWA Yoshiyuki  University of Shizuoka, School of Pharmaceutical Sciences
KAMEI Miwako  Nihon University, School of Pharmacy
KANEKO Toshio  Nihon University, School of Pharmacy
KAWASAKI Ikuo  Mukogawa Women’s University, School of Pharmaceutical Sciences
KIUCHI Yuji  Showa University, School of Medicine
KOBAYASHI Aya  Showa University, School of Pharmacy
KOHNO Takeyuki  Setsunan University, Faculty of Pharmaceutical Sciences
KUSAKABE Yoshio  Teikyo University, Faculty of Pharma-Sciences
MASADA Mikio  Osaka University of Pharmaceutical Sciences
MASHINO Tadahiko  Keio University, Faculty of Pharmacy
MATSUMOTO Tsukasa  Iwaki Meisei University, Faculty of Pharmacy
MOCHIZUKI Mayumi  Keio University, Faculty of Pharmacy
NAKAMURA Akihiro  Showa University, School of Pharmacy
NAKASHIMA Mikiro  Nagasaki University, Graduate School of Biomedical Sciences
NAKAYAMA Hirokazu  Kobe Pharmaceutical University
OGRA Yasumitsu  Chiba University, Graduate School of Pharmaceutical Sciences
OHASHI-KOBAYASHI Ayako  Iwate Medical University, School of Pharmacy
OZAWA Koichiro**  Hiroshima University, Graduate School of Biomedical & Health Sciences
SAKUMA Shinji  Setsunan University, Faculty of Pharmaceutical Sciences
SATOH Haruko  Keio University Hospital, Department of Pharmacy
SHINOMIYA Kazufusa  Nihon University, School of Pharmacy  
SKIER Eric M.  Nihon University, School of Pharmacy  
SUMI Daigo  Tokushima Bunri University, Faculty of Pharmaceutical Sciences  
SUZUKI Tadashi  Nagoya City University, Graduate School of Pharmaceutical Sciences  
Takahashi Kazuko  Keio University; Kanagawa University of Human Services, Faculty of Pharmacy  
TAMAMAKI Kinko  Kobe Pharmaceutical University  
TAZAWA Kyoko  Freelance medical translator  
TOMITA Taisuke  The University of Tokyo, Graduate School of Pharmaceutical Sciences  
TSUIJI Makoto  Hoshi University School of Pharmacy and Pharmaceutical Sciences  
UCHIRO Hiromi  Tokyo University of Science, Faculty of Pharmaceutical Sciences  

* Preface  
** Chief  

This project, which is translated as MODEL CORE CURRICULUM FOR PHARMACY EDUCATION in English, has been supported by a grant from the Ministry of Education, Culture, Sports, Science and Technology, Japan from April 2016 and was completed in March 2018.
